Risk profile

The Fund invests in equities, fixed interest securities, collective investment schemes, other transferable securities, money market instruments, warrants, cash and deposits. The Fund may hold concentrated positions. If one of these concentrated positions declines in value, or is otherwise adversely affected, this can have a greater effect on the Fund's value than if it held less concentrated positions. The Fund may invest in smaller companies, which can be more risky than larger companies due to a lack of liquidity and increased volatility. The shares of smaller companies may be subject to more abrupt price movements than shares of larger companies. As the Fund invests abroad, it is exposed to changes in exchange rates which may cause the value of investments to fall or rise independently of the underlying holdings. The yield is subject to fluctuation and is not guaranteed. The Fund invests in corporate bonds whose prices are aligned with the credit worthiness of the underlying corporate. A deterioration in a corporate's performance may have a negative impact on its bond price. Corporate bonds are not traded as frequently as government bonds and therefore may be more difficult to trade in distressed markets. The Fund invests in high yielding bonds which have an increased risk of capital erosion through default or if the underlying yield is below the distribution yield. High yield bonds are not traded as frequently as government bonds and therefore may be more difficult to trade in distressed markets.
